Product Description

Crystal brick is a building decoration material made of high-quality glass, which has the characteristics of high transparency and gloss. The surface of the crystal bricks is crystal clear, reflecting beautiful light and colors, bringing a bright effect to the space. Its various color options and texture designs make it suitable for various decoration styles, from modern and simple to luxurious and retro, and can show a unique sense of art.

Hollow crystal bricks are a variant of innovative designs based on crystal tiles, which have a hollow structure that makes them more light and transparent. Through its unique hollow effect, hollow crystal bricks allow light to pass freely inside, creating fascinating illusions and shadow effects. Its artistic appearance and unique texture make it ideal for creating sleek modern, and chic spaces.

Jade glass is a building material with glass as its main component, which combines the texture of jade with the transparency of glass to create a unique texture and color effect. The surface of jade glass presents unique patterns and textures, bringing a natural texture and artistic touch. Its unique appearance makes it widely used in high-end architectural projects such as luxury residences, commercial spaces, and art venues.

Whether it is crystal bricks, hollow crystal bricks, or jade glass, they all uniquely charm indoor and outdoor spaces with their unique materials, exquisite surface patterns, and artistic feelings. Whether used as wall decoration, floor laying, or special space embellishment, they can create a unique artistic atmosphere and visual effects, bringing a new experience to architectural design.

The image shows the interior of a modern restaurant. On the left, there are two large, cylindrical columns covered in a grid of translucent, greenish-yellow panels. To the right, a curved glass wall reveals a multi-story structure with many small, illuminated compartments, possibly a display or a living wall. In the foreground, there are wooden tables set with plates and glasses. A large, dried plant arrangement is visible in the center. The overall atmosphere is contemporary and sophisticated.

CRYSTAL BRICK

Description

Crystal brick, known for its crystal-clear appearance and unique optical effects, is a high-quality building material. Made of high-quality raw glass, it is processed uniquely to form a complex, transparent brick body. Crystal brick usually has a clear and transparent appearance, but it can also be colored in various colors by adding pigments. Regarding surface patterns, decorations such as textures, designs, or three-dimensional patterns can increase the artistic sense of crystal tiles.

Crystal brick has excellent light permeability, filling the room with bright natural light. At the same time, it is also waterproof, easy to clean, and wear-resistant, making it an ideal choice for decorating walls and floors. Crystal brick is solid and stable, suitable for interior decoration, such as living room, dining room, bathroom, etc. Its unique light refraction effect can add a sense of luxury and modernity to the space.

HOSET

Art Brick Series

The image shows the interior of a room with a high ceiling. Two prominent cylindrical pillars, constructed from dark red bricks, stand in the center. The walls are made of glass blocks, arranged in a grid pattern. On the left wall, there is a small, dark-framed rectangular window. The floor is a smooth, light-colored surface. The lighting is soft and even, highlighting the textures of the brick and glass.

HOLLOW CRYSTAL BRICK

Description

Hollow crystal brick is a lightweight building material with appearance and characteristics similar to crystal brick but has more advantages in terms of weight and installation. Hollow crystal bricks are also made of high-purity glass materials, but a hollow structure design is used in manufacturing to make them lighter.

The color and surface pattern of hollow crystal bricks are similar to those of crystal bricks, and different colors and decorative designs can be selected according to needs. Hollow crystal bricks have lightweight, sound insulation, moisture, and wear resistance while maintaining crystal bricks' transparency and light refraction effect, bringing modernity and brilliance to the space. Hollow crystal bricks are suitable for interior wall and ceiling decoration, especially for places where building weight needs to be reduced, such as commercial spaces, hotel lobbies, etc.

JADE GLASS

Description

Jade glass usually shows the color and texture of natural jade, such as bluish-white, dark green, and so on. At the same time, unique patterns and textures can be created through melting and mixing techniques to increase their decorative effect. Jade glass has the high hardness and wear resistance of natural stone and, at the same time, has the transparency and light refraction effect of glass. It's also water-resistant, easy to clean, and chemical-resistant, making it ideal for high-end finishes.

These materials show unique beauty and characteristics in architectural decoration, and through their application, they can bring stunning, modern, and elegant decorative effects to the space. Whether it is a commercial or private residence, they can add a unique charm and artistic atmosphere to the space.

2. Construction Process

2.1 Level the ground, try placing the first layer of bricks, and stick them firmly after confirmation.

2.2 Dispense the four corners and sides of the brick with special structural glue, and be careful not to overflow the glue.

2.3 Each layer needs to be leveled, which can be assisted by toothpicks or transparent rubber pads, and pulled off after the glue is cured.

2.4 The modulus of the top layer of bricks is wrong, you can use a diamond saw blade to cut and fill.

2.5 The glass wall can be scrubbed 24 hours after the completion of wall laying.

Jade Glass

1. How to install jade glass in flat laying?

When laying on the plane, a gap of 3-5mm should be reserved between the jade glass and the jade glass or between the jade glass and the wall. The gap needs to be filled with glass structural glue (or elastic adhesive) so that the jade glass has room for expansion and contraction when it expands without cracking.

2. What should be paid attention to when laying jade glass?

When laying jade glass, the back needs to be pasted with glass structural glue. Do not use cement to paste jade glass, because the cement will crack after curing, and it is easy to pull the jade glass and make it crack.

3. What should be paid attention to when using jade glass as a countertop?

When making the countertop, the bottom of the jade glass should be lined with a plate with a thickness of more than 15mm. The plate should be flat, and the force of the jade glass liner should be even.

4. Can jade glass be used outdoors?

Jade glass is a pure inorganic material that is burned at high temperature, resistant to ultraviolet rays, and never aging. It is not only suitable for indoor use but also for outdoor use all year round.

5. Can jade glass achieve the effect of safety glass?

Yes, according to the requirements of different use environments, safety explosion-proof film or synthetic laminated glass can be pasted on the front and back of the jade glass, so as to improve product strength. Even if jade glass is accidentally damaged by force, the broken pieces can adhere together. Falling off makes jade glass a safe product in the true sense.

6. What should be paid attention to when using jade glass as a countertop?

When using jade glass as a countertop, try to avoid heat sources above 90°C from contacting the surface of jade glass for a long time.

7. What are the precautions for jade glass to create light transmission effect?

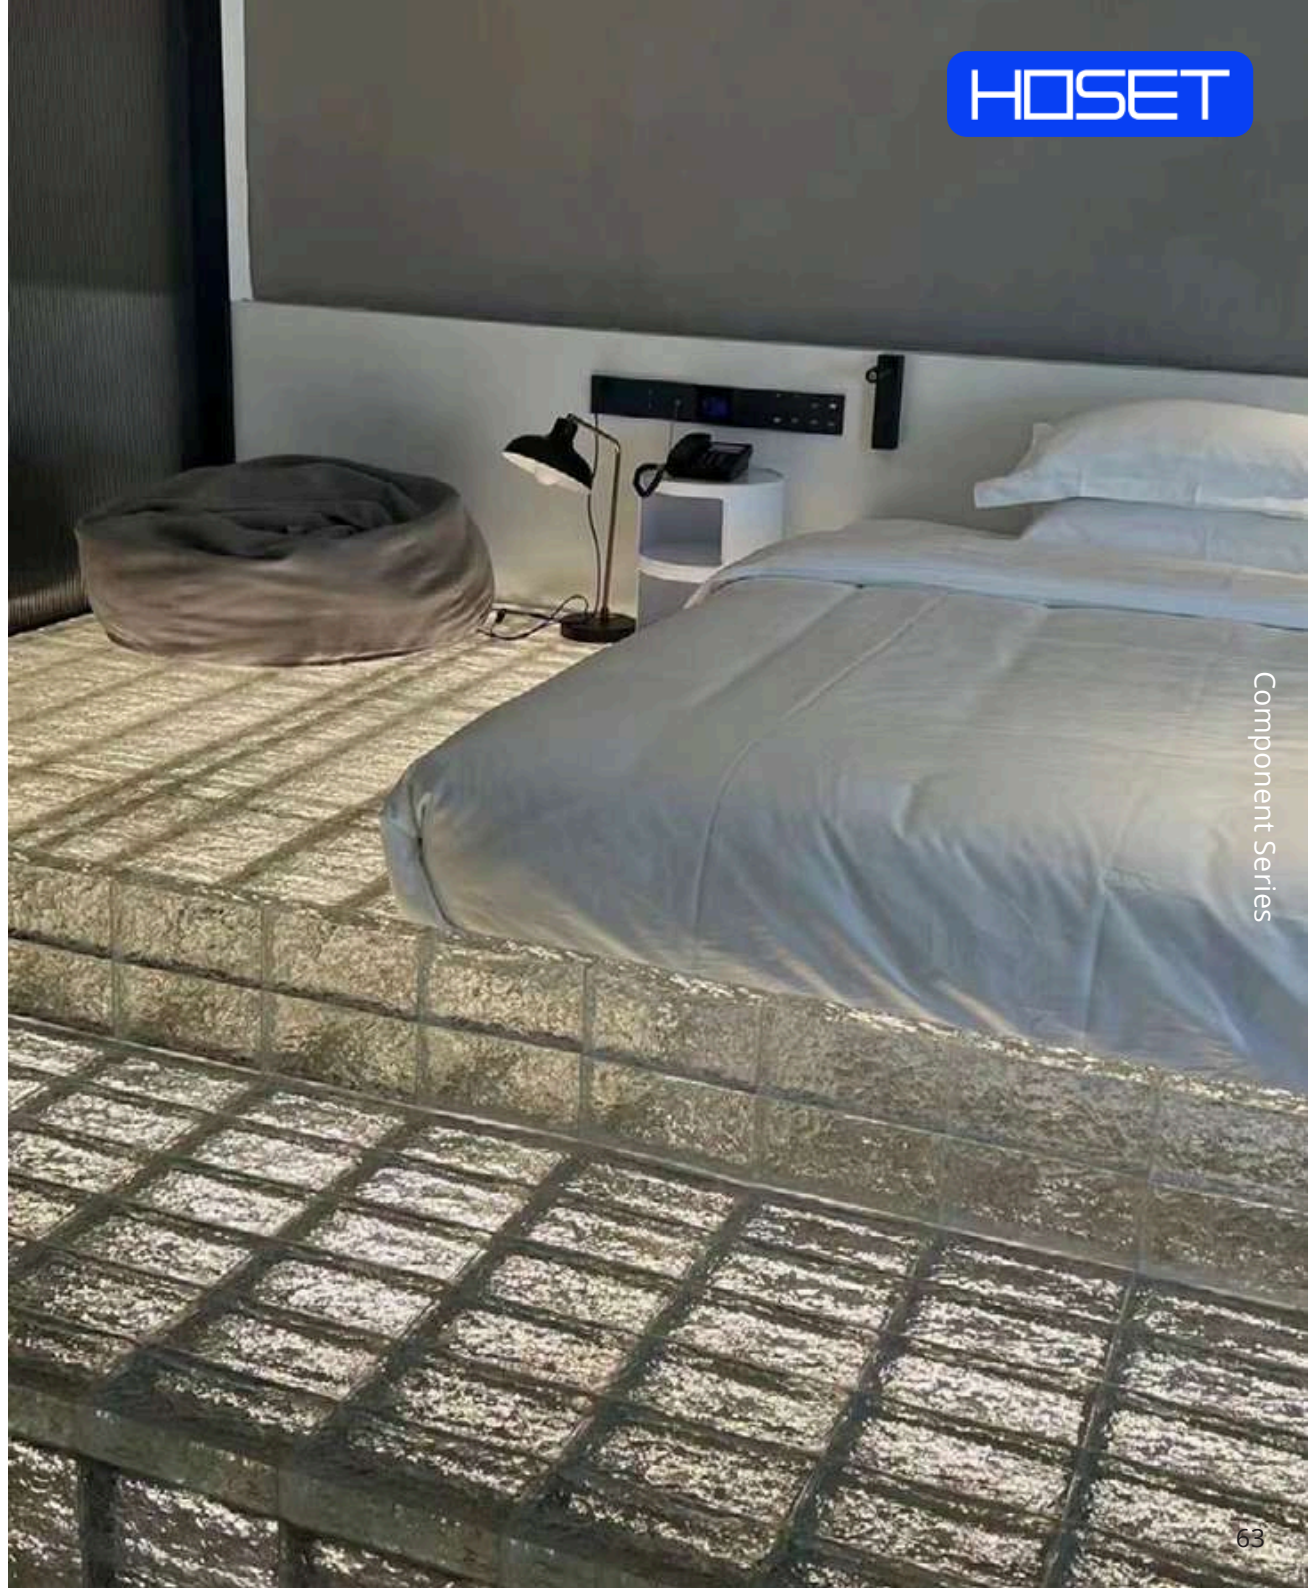

Jade glass has a wonderful light-transmitting effect. When using light-transmitting light sources, please do not use light sources with high heat generation, such as incandescent light sources, but light sources with low heat generation, such as cold light source LEDs, energy-saving light sources, etc. The light source should not be close to the jade glass, the distance should be kept above 150mm, and there must be a good heat dissipation space.

Product Supply Chain

After years of accumulation and hard work, HOSET now has a large operation service team and rich experience, providing customers with a full range of integrated services from product development, production, OEM, procurement, agency, import, warehousing, logistics services to sales services.

Therefore, in addition to providing material procurement services, HOSET also provides customers with one-stop services related to hotel business, including hotel renovation, hotel interior design, hotel product research and development, etc.

In the past 18 years, HOSET has provided a complete set of renovation solutions for 1000+ hotel owners around the world, as well as related hotel products such as bedding, bathroom linen, tableware, furniture, and hotel personal product sets. Partners are located in more than 200 countries and regions around the world, including North America, Europe, Asia, Central America, the Middle East, Africa, etc.

Full-Line Supply Chain Of New Materials
